

A4 Notes:

- Make a Google sheet of cadet in duty
- Make a Google form of cadet in duty, allow gmc cadets to edit it and make it their own
- Make a new inventory tracker that allows cadets to know where items are in the storage room, and where it should be put back
- Make the cadets do the inventory actions
- New ranks being handed out / tracked
- Need new process that allows cadets to report returned items
- Biweekly in-person meetings and weekly update in the channel of a minimum 3 items completed each week, doesn't matter how small or large the tasks are

Logistics Improvement Projects:

- Ask the cadets to come up with project ideas within the first 2 weeks, presentation about them, let them own the ideas, ask if they need help
- Assign one of the cadets the task of assembling the new org chart on the white board
- Assign one cadet to do checks of cadet on week
- Assign one cadet to be in charge of flight Sims
- Each cadet will be in charge of 1 project, or 2 for one bug project. Ask for outline, timeline, updates

My Project Ideas:

- New way of requesting items for events (llab, aas, color guard, etc.)
- New uniform tracker for the new Capt.
- New way to ensure items are easily found and put back, maybe set equipment out for events and request items to be out on a table so they can be put back properly (might have a time issue)
- Complaint system so we can be informed of any issues

Documentation of every project, where it is, why it is happening, steps being taken, next steps, easy transition for the next cadets to take it over. SOP documentation of everything that is being done to better help those coming next.

Track uniforms:

- Each tab is for an AS class (100, 200, 300, 400, 5th year)
- Check boxes to confirm if cadets have met certain requirements
- Red background means they don't meet the requirements, yellow means they met it but don't have the item yet, green means they met the requirements and have the item
 - Make a script that pulls the data and makes a list of required but items not provided list for each cadet
- Should there be another checkbox of yes, the cadet has the item or not? I could make it a form for cadets to fill out, they fill out their sizes for everything, and they or uniform provider submit a google form for when they received the uniform with the item, the size, and the quantity
-

Completed:

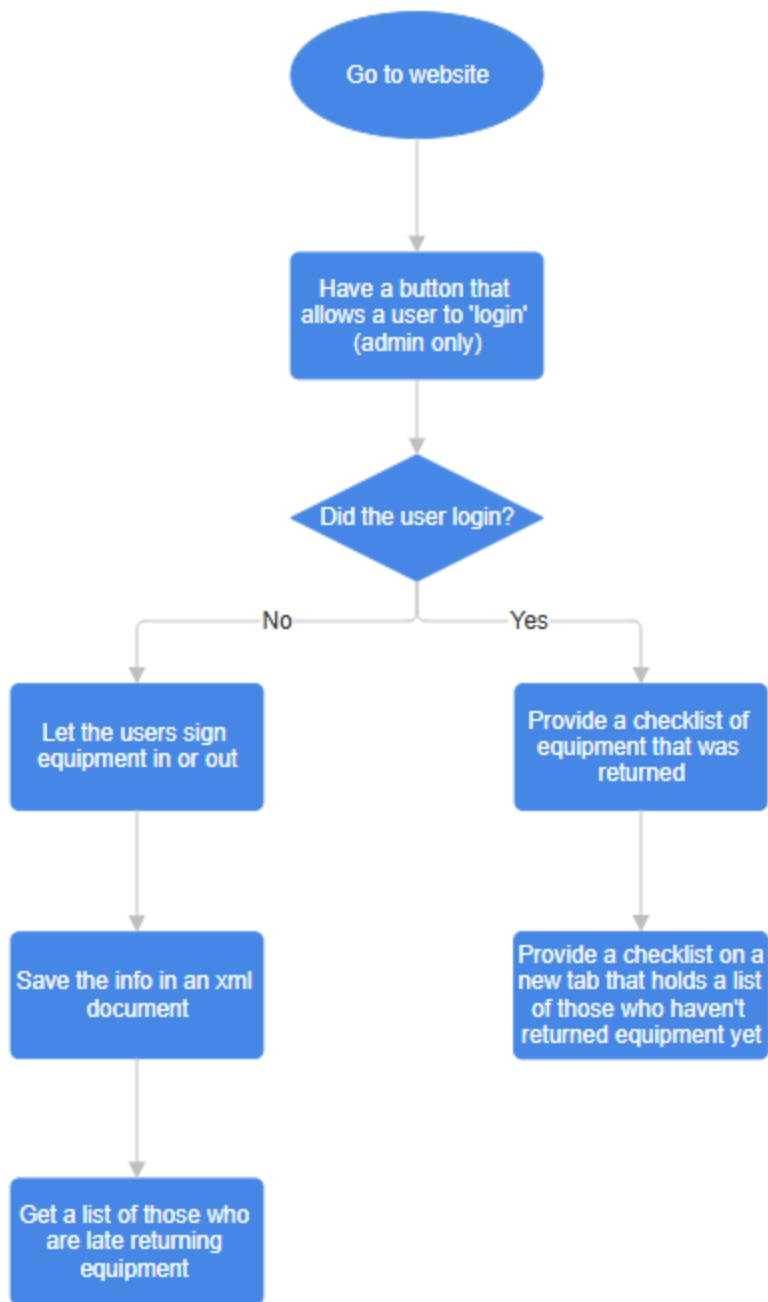

- SOP templates
- Cadet on Duty Schedule

To Do:

- Make the schedule pretty
- Create example SOPs for the staff to be able to read
- Decide on new way to track uniforms
- Decide on new way to track equipment, how to give and receive with full accountability
- App to track signing in and out the rooms in the detachment, especially around MDO and evaluation time

Logistics software:

- Have a simple form/website that asks for name, signing in or out, equipment and quantity, when the equipment will be taken and put back, why the equipment is needed
- Have a google sheet or xml that shows the info that was collected from the form above with the following key
 - None: yet to pick up
 - Yellow: equipment picked up, but not returned
 - Red: equipment not returned and is late
- Make the equipment part options so that those returning items can just select returned
- Have a method of emailing out information, or a list created of late items
- Have a way to login as "admin" so that the staff can go through items to see equipment claimed to be returned, and the quantity. Staff can simply check a box if returned, check a different box if checked but not all or none was returned, and or fill in the box for additional details such as returned in the wrong location or item returned broken
- Reach out to RIT to see if they can host the final product on their servers instead of needing to be passed from person to person on github
